

DR. ANIRBAN NAG

Consultant - Surgical Oncology

Qualification

MBBS | DNB

Overview

Dr. Anirban Nag is a Consultant in Surgical Oncology at Manipal Hospital, Rangapani. With extensive training and experience in general, laparoscopic, and advanced oncological surgeries, Dr. Nag has developed a strong expertise in managing complex malignancies. His professional journey began with an MBBS in 2011, after which he pursued a DNB in 2017 from the Department of General and Laparoscopic Surgery. Dr. Nag has a keen interest in various domains of oncology, with a special focus on laser coloproctology. His expertise extends to both assisting and independently performing various oncological surgeries, including colorectal, stomach, and hepato-biliary malignancies. His proficiency in gynecologic oncological surgeries is remarkable, particularly in complex procedures such as those involving peritoneal surface malignancies. He is well-trained in performing Hyperthermic Intraperitoneal Chemotherapy (HIPEC) surgery. His proficiency in colorectal cancer surgery is particularly noteworthy, as he has successfully managed numerous cases involving both early-stage and advanced malignancies. His expertise in hepato-biliary malignancies, including surgeries for liver, pancreas, and bile duct cancers, showcases his ability to handle some of the most challenging surgical cases in oncology. His interest in laser coloproctology sets him apart in the field, as he has been at the forefront of utilizing laser technology in the treatment of various anorectal conditions. He has been involved in the surgical management of ovarian, cervical, and endometrial cancers,. Dr. Nag's experience and expertise in surgical oncology have allowed him to successfully perform highly complex cancer surgeries, including cytoreductive surgeries and advanced laparoscopic procedures. His work in the field of peritoneal surface malignancy surgery, including HIPEC procedures. His contributions to the field of surgical oncology, particularly in the management of colorectal, stomach, hepato-biliary, and gynecological cancers, continue to make a significant impact in the lives of cancer patients.
