

DR. SUSHMA GOPALAN

Lead Consultant- Child Life Services

Qualification

PhD (Psychology) | MA (Psychology) | MSc (BCGBT) | PGDMH | PGDECFE | Dip. Immunology | Dip. Genetic Engineering

Overview

Dr. Sushma Gopalan is a highly skilled paediatric psychologist in Yelahanka. She is currently practising as the Lead Consultant – Pediatric Psychology and Child Life Services at Manipal Hospital Yelahanka, Bangalore, bringing a transformative approach to paediatric care by integrating emotional, behavioural, and psychological support into medical treatment for children and their families. With her pioneering vision and extensive expertise in paediatric psychology, hospital-based emotional care, and family support systems, she is widely recognised as one of the best paediatric psychologists in Yelahanka, known for her ability to humanise hospital environments and redefine holistic paediatric healing. With a multifaceted academic background including a Ph.D. in Psychology, MA in Psychology, MSc in Behavioural Cognitive Behavioural Therapy (BCGBT), PGDMH, PGDECFE, Diploma in Immunology, and Diploma in Genetic Engineering, Dr. Sushma brings a deeply interdisciplinary approach to clinical practice. She is the key force behind introducing Child Life Services in India, a structured hospital-based psychosocial program designed to support children, parents, and healthcare providers emotionally during illness, diagnosis, hospital stays, and long-term treatment. Her vision, driven by the belief that “healing is not complete until the mind and heart find peace,” has shaped India's first integrated psychosocial care framework in paediatrics, making her one of the best paediatric psychologists in Yelahanka for children needing emotional support alongside medical care. Dr. Sushma's expertise spans paediatric psychological care, family counselling, trauma-informed therapy, maternal mental health, chronic illness support, paediatric oncology, behavioural assessments, grief counselling, and hospital-based psycho-social care. She specialises in helping children cope with anxiety, fear, depression, hospitalisation stress, treatment trauma, behavioural changes, body image concerns, and emotional recovery. She plays a pivotal role in multiple paediatric departments, including paediatric endocrinology, bone marrow transplant (BMT), immune disorders, pulmonology, oncology, neurology, and general paediatrics, contributing to both emotional well-being and treatment adherence. As an expert in Child Life Services, she designs emotionally supportive hospital environments through age-appropriate medical education, play therapy, art therapy, procedural preparation, parent guidance, sibling support, and therapeutic storytelling. Through her programs, children feel more informed, prepared, and emotionally secure during treatment, significantly reducing fear, treatment resistance, and procedural distress. She is highly revered for her ability to transform medical procedures into emotionally supportive, developmentally appropriate experiences for children. Her work also extends deeply into maternal and perinatal mental health, supporting women undergoing fertility treatments, IVF cycles, complicated pregnancies, postpartum depression, infant loss, and adjustment challenges. She firmly believes that parental emotional stability directly influences child health outcomes, making her family-centric counselling approach highly impactful in NICU and paediatric critical care settings. Dr. Sushma is also a visionary leader in community mental health and psychological education. She has trained over 50 school counsellors, conducted 50+ workshops for children, parents, healthcare providers, teachers, and corporate professionals, and actively advocates mental health awareness among defence personnel and emotionally high-risk groups. She is known for turning complex psychological concepts into practical tools for resilience, emotional regulation, communication, parenting, and trauma recovery. Her international affiliations with the Association of Child Life Professionals (ACLP), USA, along with her role as a member of Indian and global psychological, counselling, paediatric emergency medicine, and emotional healthcare associations, underline her global impact. Her research contributions include multiple publications on hospital psychology, behavioural transformation, trauma recovery, pediatric mental health, and caregiver support models. With her rare ability to blend clinical precision with empathy, Dr. Sushma continues to redefine holistic paediatric healing at Manipal Hospital Yelahanka. Her vision to establish Child Life Departments in every Indian hospital, train emotionally aware healthcare professionals, and integrate mental health as an

essential part of paediatric medicine embodies her leadership and dedication. Today, she stands as a pioneer transforming paediatric emotional care in India, one child, one family, and one hospital at a time, making her undoubtedly one of the best paediatric psychologists in Yelahanka.
